Commercial Property Listing Form Specification

Purpose

This document defines the clone-ready form for commercial property listings with two modes:

- Commercial Rent
- Commercial Sale

The form is a multi-step wizard. The user must save the current step before moving to another step. No listing should be published until all required fields pass validation and the user completes the final review.

Form entry

Initial controls

Field	UI control	Data type	Required	Notes
City	Searchable dropdown	`string` / city ID	Yes	Drives locality suggestions
WhatsApp updates	Toggle	`boolean`	No	Default `true` in the observed UI
Property category	Tabs	enum: `residential`, `commercial`, `land_plot`	Yes	Select `commercial`
Advertisement type	Segmented buttons	enum: `rent`, `sale`	Yes	Drives the downstream form

Commercial property types

Use these values for `propertyType`:

- `office_space` — Office Space
- `co_working` — Co-Working
- `shop` — Shop
- `showroom` — Showroom
- `godown_warehouse` — Godown/Warehouse
- `industrial_shed` — Industrial Shed
- `industrial_building` — Industrial Building
- `other_business` — Other business
- `restaurant_cafe` — Restaurant/Cafe

Wizard structure

Both modes use the following steps:

1. Property Details
2. Location Details
3. Rent Details or Sale Details
4. Amenities
5. Gallery
6. Additional Information
7. Schedule
8. Review and publish

Recommended state:

```
type ListingMode = "rent" | "sale";

interface ListingState {
  category: "commercial";
  mode: ListingMode;
  currentStep: number;
  completedSteps: number[];
  data: CommercialListing;
}
```

The left-side step navigation may show all steps, but a step must be disabled until its prerequisites are saved.

Step 1 — Property Details

Field matrix

Field key	Label	UI control	Data type	Required	Dependency / rule
`propertyType`	Property Type	Searchable dropdown	enum	Yes	Determines compatible building types and ideal-use options
`buildingType`	Building Type	Searchable dropdown	enum	Yes	Options depend on `propertyType`
`ageOfProperty`	Age of Property	Dropdown	enum	Yes	Values should be ordered from newest to oldest
`floor`	Floor	Dropdown	integer or enum	Yes	Must not exceed `totalFloors`
`totalFloors`	Total Floor	Dropdown	positive integer	Yes	Must be greater than or equal to `floor`
`superBuiltUpArea`	Super Built Up Area	Numeric input / stepper	decimal	Yes	Unit is square feet; must be greater than zero
`furnishing`	Furnishing	Dropdown	enum	Yes	Common values: unfurnished, semi-furnished, fully furnished
`onMainRoad`	On Main Road	Checkbox/toggle	boolean	No	Default `false`
`cornerProperty`	Corner Property	Checkbox/toggle	boolean	No	Default `false`

Property-type dropdown options

```
type CommercialPropertyType =
  | "office_space"
  | "co_working"
  | "shop"
  | "showroom"
  | "godown_warehouse"
  | "industrial_shed"
  | "industrial_building"
  | "other_business"
  | "restaurant_cafe";
```

Building-type dependency

The building-type dropdown must be populated after the property type is selected. The observed `Office Space` branch contained:

- Independent House
- Business Park
- Mall
- Standalone building
- Independent shop

Use a configuration table rather than hard-coding the options inside the UI:

```
interface Option {
  value: string;
  label: string;
  active: boolean;
}

interface BuildingTypeMap {
  [propertyType: string]: Option[];
}
```

If a user changes `propertyType`, clear `buildingType` and any incompatible dependent values.

Age options

Recommended enum values:

- `less_than_1_year` — Less Than a Year
- `one_to_five_years` — 1 To 5 Year
- `five_to_ten_years` — 5 To 10 Year
- `more_than_10_years` — More Than 10 Year
- `under_construction` — Under Construction

The exact available values may be restricted by the property type or listing mode.

Furnishing options

- `unfurnished` — Unfurnished
- `semi_furnished` — Semi Furnished
- `fully_furnished` — Fully Furnished

Step-1 validation

Required validation messages should be field-specific:

- `Property Type Required`
- `Building Type Required`
- `Property Age Required`
- `Floor Required`
- `Total Floor Required`
- `Built Up Area is Required`
- `Property Furnishing Required`

Additional validation:

- `superBuiltUpArea > 0`
- `floor >= 0`
- `totalFloors >= floor`
- If floor is `ground`, store it consistently as `0` or a dedicated enum value.

Step 2 — Location Details

Field key	Label	UI control	Data type	Required	Dependency / rule
`cityId`	City	Searchable dropdown	ID/string	Yes	Entry-screen city value
`localityId`	Locality	Searchable dependent dropdown	ID/string	Yes	Filtered by city
`addressLine`	Address	Text input	string	Yes	Minimum length recommended
`landmark`	Landmark	Text input	string	No	Nearby landmark
`latitude`	Latitude	Map result / hidden numeric	decimal	Yes	Set by map selection or geocoding
`longitude`	Longitude	Map result / hidden	decimal	Yes	Set by map selection

		numeric			or geocoding
`locationText`	Confirmed location	Read-only text	string	Yes	Display the selected address

Behavior:

9. City is selected first.
10. Locality search is disabled until city is selected.
11. Changing city clears locality, address suggestions, latitude, and longitude.
12. The user must confirm a map/address result before continuing.

Step 3A — Commercial Rent Details

Render this step only when `mode === "rent"`.

Field key	Label	UI control	Data type	Required	Notes
`monthlyRent`	Expected Rent	Currency input	integer/decimal	Yes	INR; greater than zero
`rentNegotiable`	Rent Negotiable	Toggle	boolean	No	Default may be `false`
`securityDeposit`	Security Deposit	Currency input	integer/decimal	Yes	Greater than or equal to zero
`depositNegotiable`	Deposit Negotiable	Toggle	boolean	No	Default may be `false`
`maintenanceAmount`	Maintenance	Currency input	integer/decimal	No	Use with maintenance frequency
`maintenanceFrequency`	Maintenance Frequency	Dropdown	enum	Conditional	Monthly, quarterly, yearly, included
`leaseDuration`	Lease Duration	Dropdown/input	integer	No	Store months
`lockInPeriod`	Lock-in Period	Dropdown/input	integer	No	Store months; cannot exceed lease duration
`availableFrom`	Available From	Date picker	ISO date	Yes	Cannot be invalid/past if policy forbids it
`occupancyStatus`	Current Status	Dropdown	enum	No	Vacant, occupied, available soon
`idealFor`	Ideal For	Multi-select dropdown	string[]	No	Options depend on property type

Rent-specific validation:

- `monthlyRent > 0`
- `securityDeposit >= 0`
- `lockInPeriod <= leaseDuration` when both are supplied
- `maintenanceAmount` is required when maintenance is marked as payable separately
- `availableFrom` must be a valid date

Step 3B — Commercial Sale Details

Render this step only when `mode === "sale"`.

Field key	Label	UI control	Data type	Required	Notes
`expectedSalePrice`	Expected Sale Price	Currency input	integer/decimal	Yes	INR; greater than zero
`priceNegotiable`	Price Negotiable	Toggle	boolean	No	Default may be `false`
`pricePerSqFt`	Price per Sq.ft	Currency input/calculated	decimal	No	Can be calculated from price and area
`ownershipType`	Ownership Type	Dropdown	enum	Yes	Freehold, leasehold, other
`maintenanceAmount`	Maintenance	Currency input	integer/decimal	No	Optional recurring cost
`maintenanceFrequency`	Maintenance Frequency	Dropdown	enum	Conditional	Monthly, quarterly, yearly, included
`possessionDate`	Possession / Available From	Date picker	ISO date	Yes	Date property can be handed over
`occupancyStatus`	Current Status	Dropdown	enum	No	Vacant, occupied,

					available soon
`parkingCount`	Parking Slots	Numeric input	integer	No	Must be zero or greater
`idealFor`	Ideal For	Multi-select dropdown	string[]	No	Depends on property type

Observed public commercial-sale listings expose sale price, ownership type, parking, floor, furnishing, age, built-up area, and availability. The sale form should therefore retain these values in the canonical listing object.

Sale-specific validation:

- `expectedSalePrice > 0`
- `ownershipType` is required
- `possessionDate` must be a valid date
- `parkingCount >= 0`
- `pricePerSqFt` should be calculated as `expectedSalePrice / superBuiltUpArea` unless the user explicitly overrides it.

Step 4 — Amenities

Use dropdowns or radio groups for single-choice amenities and toggles where the value is binary.

Field key	Label	UI control	Data type	Required	Options
`powerBackup`	Power Backup	Dropdown	enum	No	Full, partial, need to arrange, none
`lift`	Lift	Dropdown	enum	No	Common, private, none
`washroom`	Washroom(s)	Dropdown	enum	No	Private, shared, no washroom
`waterStorage`	Water Storage Facility	Dropdown	enum	No	Yes, no, NA
`security`	Security	Toggle/dropdown	enum	No	Yes, no
`wifi`	Wi-Fi	Toggle/dropdown	enum	No	Yes, no
`parkingAvailable`	Parking Available	Toggle	boolean	No	If true, show parking count/type
`parkingCount`	Parking Slots	Numeric input	integer	Conditional	Required when parking is enabled
`airConditioning`	Air Conditioning	Dropdown	enum	No	Central, split, none
`otherAmenities`	Other Amenities	Multi-select/text	string[]	No	Extensible configuration

Changing `parkingAvailable` to false must clear or hide `parkingCount` and parking type.

Step 5 — Gallery

Field	UI control	Data type	Required	Rules
Property photos	Multi-file upload	`File[]` / media IDs	Recommended minimum 1	JPG, PNG, WebP; validate size
Primary photo	Sortable selection	media ID	Yes when photos exist	First image by default
Property video	File upload or URL	media ID/string	No	Optional
Photo order	Drag-and-drop	media ID[]	No	Persist ordering

Recommended limits:

- Maximum 20 images
- Maximum 10 MB per image
- Reject unsupported formats
- Show upload progress, retry, remove, and upload-error states

Step 6 — Additional Information

Field key	Label	UI control	Data type	Required	Notes
`description`	Property Description	Multiline textarea	string	Yes	Add character limit, e.g. 50–3,000
`idealFor`	Ideal For	Multi-select dropdown	string[]	No	Dependent on property type
`otherFeatures`	Other Features	Multiline textarea	string	No	Free-form details
`mainRoad`	On Main Road	Checkbox/toggle	boolean	No	Same value as Step 1 if shown there
`cornerProperty`	Corner Property	Checkbox/toggle	boolean	No	Same value as Step 1 if shown there

Avoid storing duplicate fields in two steps. If a field is displayed in both places, use one canonical value in state.

Step 7 — Schedule

Field key	Label	UI control	Data type	Required	Notes
`preferredVisitDays`	Preferred Visit Days	Multi-select	enum[]	No	Monday–Sunday
`preferredVisitStart`	Visit Start Time	Time picker	time	No	Must precede end time
`preferredVisitEnd`	Visit End Time	Time picker	time	No	Must follow start time
`contactPreference`	Contact Preference	Radio group	enum	Yes	Phone, WhatsApp, both
`contactAvailability`	Contact Availability	Dropdown	enum	No	Anytime, business hours, custom

Review and publish

The review screen must show:

- Rent or sale mode
- Property type and building type
- Location
- Area and floor information
- Rent or sale price
- Deposit or ownership details
- Amenities
- Photos
- Description
- Schedule/contact preferences

The final action should be a clearly labeled `Publish Listing` button. It must remain disabled until all mandatory fields are valid.

Dependency rules

Parent field	Child field	Behavior
`mode`	Rent Details / Sale Details	Render exactly one branch
`cityId`	`localityId`	Filter locality options by city
`propertyType`	`buildingType`	Replace building-type options; clear old value
`propertyType`	`idealFor`	Filter business-use options
`floor`	`totalFloors`	Require total floors to be at least selected floor
`parkingAvailable`	`parkingCount`	Show and require count only when enabled
`maintenanceMode`	`maintenanceAmount`, `maintenanceFrequency`	Show financial fields only when applicable
`availableFrom` / `possessionDate`	Schedule	Prevent invalid or inconsistent dates
`gallery`	Review/publish	Require at least one valid primary photo if

		business rules require it

Suggested TypeScript model

```
interface CommercialListing {
  category: "commercial";
  mode: "rent" | "sale";

  cityId: string;
  localityId: string;
  addressLine: string;
  landmark?: string;
  latitude: number;
  longitude: number;

  propertyType: CommercialPropertyType;
  buildingType: string;
  ageOfProperty: string;
  floor: number | "ground";
  totalFloors: number;
  superBuiltUpArea: number;
  furnishing: "unfurnished" | "semi_furnished" | "fully_furnished";
  onMainRoad: boolean;
  cornerProperty: boolean;

  rent?: {
    monthlyRent: number;
    rentNegotiable: boolean;
    securityDeposit: number;
    depositNegotiable: boolean;
    maintenanceAmount?: number;
    maintenanceFrequency?: string;
    leaseDuration?: number;
    lockInPeriod?: number;
    availableFrom: string;
    occupancyStatus?: string;
    idealFor?: string[];
  };

  sale?: {
    expectedSalePrice: number;
    priceNegotiable: boolean;
    pricePerSqFt?: number;
    ownershipType: "freehold" | "leasehold" | "other";
    maintenanceAmount?: number;
    maintenanceFrequency?: string;
    possessionDate: string;
    occupancyStatus?: string;
    parkingCount?: number;
    idealFor?: string[];
  };

  amenities: {
    powerBackup?: string;
    lift?: string;
    washroom?: string;
    waterStorage?: string;
    security?: "yes" | "no";
    wifi?: "yes" | "no";
    parkingAvailable?: boolean;
    parkingCount?: number;
    airConditioning?: string;
    otherAmenities?: string[];
  };

  gallery: {
    mediaIds: string[];
    primaryMediaId?: string;
    videoId?: string;
  };

  description: string;
  otherFeatures?: string;
  preferredVisitDays?: string[];
```

```
  preferredVisitStart?: string;
  preferredVisitEnd?: string;
  contactPreference: "phone" | "whatsapp" | "both";
}
```

Developer acceptance criteria

- Rent and sale are separate, mutually exclusive modes.
- All required fields are visibly marked with `*`.
- Dropdowns expose keyboard navigation and searchable filtering where lists are long.
- Dependent dropdowns clear stale selections when their parent changes.
- The user cannot continue with invalid mandatory fields.
- The user cannot skip unsaved prerequisite steps.
- Numeric inputs reject negative values and invalid characters.
- Dates use ISO storage and localized display.
- A draft can be saved and resumed without losing step data.
- No publish request is sent until the final publish action is explicitly selected.
- The UI must never submit a live listing during form exploration or preview.

Verification note

The property-details labels, commercial property-type options, Office Space building-type options, step names, and validation behavior were observed directly in the NoBroker workflow. Commercial sale financial fields were cross-checked against public NoBroker commercial-sale listings. The final implementation should run one fresh rent and one fresh sale session to confirm any account-, city-, or experiment-specific option differences.
