Real Estate Property Listing Form

Field-by-field specification based on the supplied NoBroker reference screenshots. The Schedule section is intentionally excluded.

Scope: Sections 1–6 only. Field labels and visible choices follow the screenshots as closely as possible. Where the screenshot does not show a required marker or complete option list, that uncertainty is called out.

1. Property Details

Reference: plot property details screenshot.

Field label	Input type	Required	Options / unit
Plot Area	Number input	Yes	sq.ft
Length	Number input	No visible asterisk	ft.
Width	Number input	No visible asterisk	ft.
Boundary Wall	Yes/No toggle	Yes	No, Yes
Floors allowed for construction	Number input	Not marked	Number of floors
Corner Plot	Yes/No toggle	Not marked	No, Yes
Is the Land/Plot inside a gated project?	Yes/No toggle	Not marked	No, Yes
Facing	Dropdown	Not marked	North, South, East, West, North-East, South-East, North-West, South-West

Implementation notes

Use numeric inputs for plot area, length, width and floors. Store plot area in sq.ft and dimensions in ft. Consider calculating area from length × width when both are provided, while allowing manual plot-area entry.

2. Locality Details

Field label	Input type	Required	Placeholder / details
City	Dropdown	Yes	Example selected: Chennai
Locality	Searchable text input	Yes	Enter location / society name
Landmark / Street	Text input	Yes	e.g. Evergreen street
Use Current Location	Location action	—	Uses the user's current location
Mark Locality on Map	Interactive map	—	Search location and adjust map marker

Map requirements

Provide a location search box with placeholder “Search your society or nearest landmark”, a draggable marker, zoom controls and fullscreen. Save latitude, longitude and the formatted address. Support search, map selection and current-location selection.

Suggested data fields: city, locality, landmark, latitude, longitude, formattedAddress.

3. Resale Details

Field label	Input type	Required	Options / details
Expected Price	Currency / number input	Yes	■; example displayed as ■4,00,000 / ■4 Lacs
Price Negotiable	Checkbox	No	Checked / unchecked
Available From	Date picker	Yes	dd/mm/yyyy
Currently Under Loan	Checkbox	No	Checked / unchecked
Description	Multiline textarea	Not visibly marked	Property description

Description placeholder

> “Write a few lines about your property something which is special and makes your property stand out. Please do not mention your contact details in any format.”

Format prices using Indian numbering. Store the price as a numeric value, use a calendar date picker, and validate description length on both client and server.

4. Amenities

Field label	Input type	Required	Options / details
Water Supply	Dropdown	Not visible	Corporation, Borewell, Both, None
Electricity Connection	Dropdown	Not visible	Electricity Board, Solar, Both, None
Width of Facing Road (ft.)	Number input	Not visible	Width of facing road
Gated Security	Yes/No toggle	Not visible	No, Yes
Add Directions Tip for your buyers	Multiline textarea	Not visibly marked	Landmark-based directions

Directions placeholder

> “Eg. Take the road opposite to Amrita College, take right after 300m...”

The screenshot contains another partially obscured Yes/No field behind the open Water Supply dropdown. Its label is unreadable, so it is not included as a confirmed field.

5. Gallery

Photos

Visible controls: “Add Photos” and “Upload through phone”. The reference also presents alternative upload instructions via WhatsApp or email.

Videos

Visible control: “Add Videos”, with a dedicated video upload area.

Recommended implementation

Allow multiple image selection, previews, upload progress, removal and reordering. Consider a cover photo. For videos, show upload progress and previews. Validate file types, file sizes and video duration. Exact media limits are not established by the screenshots and should be configurable.

6. Additional Information

Field label	Input type	Required	Options / details
Ownership	Radio group	Not visibly marked	Freehold, Leasehold, Co-operative Society, Power of Attorney
Do you have Sale Deed Certificate?	Dropdown	Not visibly marked	Select; options not fully shown
Do you have Encumbrance certificate?	Dropdown	Not visibly marked	Select; options not fully shown
Do you have Conversion certificate?	Dropdown	Not visibly marked	Yes, No, Not Needed, Don't Know
Is the property RERA Approved?	Dropdown	Not visibly marked	Select; options not fully shown

Only the Conversion certificate dropdown shows its options in the screenshot. Do not assume the same option list applies to every certificate or the RERA field. If document uploads are added, keep them separate from status selections.

Suggested TypeScript data model

```
type PlotPropertyDetails = {
plotArea: number;
length?: number;
width?: number;
boundaryWall: boolean;
floorsAllowed?: number;
cornerPlot?: boolean;
insideGatedProject?: boolean;
facing?: string;
};

type PropertyLocality = {
city: string;
locality: string;
landmark: string;
latitude?: number;
longitude?: number;
formattedAddress?: string;
};

type ResaleDetails = {
expectedPrice: number;
priceNegotiable?: boolean;
availableFrom: string;
currentlyUnderLoan?: boolean;
description?: string;
};

type PropertyAmenities = {
waterSupply?: string;
electricityConnection?: string;
facingRoadWidth?: number;
gatedSecurity?: boolean;
directionsTip?: string;
};

type PropertyOwnership = {
ownership?: string;
saleDeedCertificate?: string;
encumbranceCertificate?: string;
conversionCertificate?: string;
reraApproved?: string;
};
```

The types cover fields visible in the screenshots only. Keep gallery media as a collection of media records. The Schedule section is excluded as requested.
